Tri-Arc Versa-Step Tread Announcement

March 31, 2021...Tri-Arc, LLC is announcing a temporary material substitution to its Versa-Step aluminum work platform.

Due to the everchanging demands in raw materials as a result of the uncertainties that the pandemic has brought, they have become increasingly difficult to source. Because of these disruptions, Tri-Arc will be making a temporary change to its Versa-Step product line steps. The steps will be manufactured using metal grip strut tread in lieu of perforated aluminum material. The platform will remain the current perforated material. Pricing will not be affected for this substitution.

To maintain the level of service and quality Tri-Arc customers and suppliers are accustomed to and have come to expect, this modest change is necessary. It is expected to begin at the end of March and last approximately 10-12 weeks. Any questions can be addressed by a member of the Tri-Arc customer service team by calling 1-800-565-2165 or e-mailing info@tri-arc.com.

Temporary grip strut tread material

Tri-Arc, LLC, based in Pittsburgh, PA, manufactures safe access solutions for use in environments when working from height safely and productively is essential. Tri-Arc's product offerings range from standard rolling ladders and work platforms to fixed steel ladders and configurable platform systems. Visit www.tri-arc.com.
